

Process Mentor provides the processes, functionality, and platform for governance within organisations.

Benefits

- ✓ The 'right fit' of project governance
- ✓ Built-in governance models from waterfall to Agile
- ✓ Flexible framework for development of own governance models
- ✓ Accountability and responsibility built into the framework
- ✓ Different levels of governance dependent on life cycle and place in the life cycle
- ✓ Project risk profiling, configurable, encapsulating organisational governance rules and providing guidance
- ✓ Reduced risk through consistent delivery
- ✓ Higher quality solutions – on-time and to budget
- ✓ Fast tracked initiation of compliant projects
- ✓ Integration with project management tools
- ✓ Projects reach productivity quicker and governance is cemented

Flexible Governance

One size does not fit all

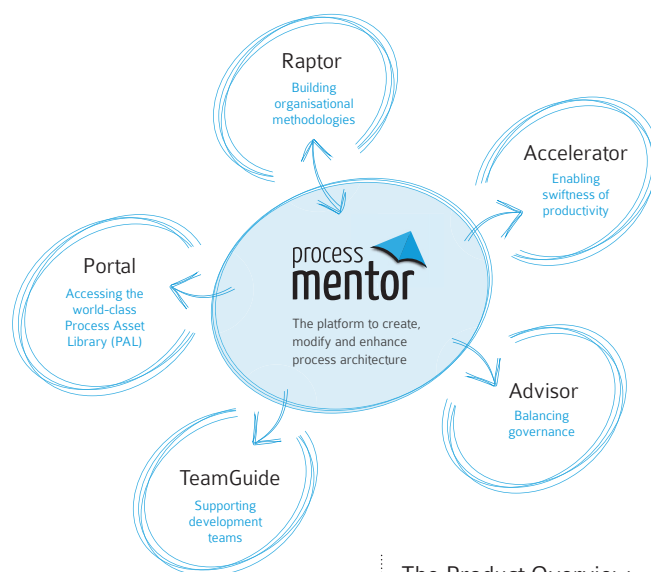

With the ability to create a line of sight from the boardroom to operations, Process Mentor® enables organisations to realise the value provided by governance.

Effective governance requires instilling governance deeply into the decision making and business processes of the organisation, from the enterprise level down to the project levels, where the rubber hits the road. Governance should create the essential linkages from business strategy to actual projects that result in greater visibility, better default behaviour, less complexity, and more business-oriented solutions.

Process Mentor closes the governance gap between decision making and project delivery by connecting accountability with performance. Ultimately, business value is dependent on an organisation's ability to deliver, whether it delivers software, services or pipelines. From a governance perspective, it becomes important to consider who is responsible for the creation of value, and moreover who is responsible and accountable.

Process Mentor

Process Mentor is Object Consulting's world-class, commercially proven process for the delivery of projects and operation of businesses.

The Product Overview

At its core, Process Mentor has roles that are accountable and responsible. Going beyond mere definitions, Process Mentor provides detailed guidance so that those liable (accountable) and those obligated (responsible) know how to fulfil their roles. Additionally, the Process Mentor architecture

ensures that any organisational-specific customisations to the process also uphold the overarching emphasis on accountability and responsibility.

By providing clear guidelines on the performance of projects and assisting in enacting them in a consistent manner, Process Mentor enhances not only the governance of projects but also their overall success, ensuring that every person within a project knows their responsibilities, how to perform those responsibilities, and what must be delivered.

Select the right governance level

Process Mentor - Advisor, encapsulated in the Process Mentor product suite, enables organisations to determine project governance using a risk-based approach. Utilising a fully configurable survey tool, Advisor assists project managers, sponsors, and steering groups to determine the appropriate level of governance for a project. Governance is determined by the business rules outlined by the organisation and captured in Advisor. Organisations can set the rules for how projects are to be run and Advisor assesses projects against those rules.

Lower overheads and achieve consistency

Process Mentor - Accelerator provides organisations with the ability to auto-generate work breakdown structures / project schedules and project portals. Accelerator ensures the required activities and deliverables become the plans and deliverables for each project / operational piece of work. Teams are provided with their activities and deliverables within their own environment, whether they are a Project Manager, Business Analyst, Developer, or Engineer.

Refer to world class assets

Process Mentor - Portal accesses the world-class library of Life Cycles, Processes, and Deliverables built into Process Mentor. These assets have been built on the experience of Object Consulting and its clients, requiring governance on all levels of projects and programmes of work. Effective governance comes from the flexibility to change project governance as required. More than access to a world class process asset library or customised methodologies, Portal provides the ability to capture suggested process improvements at the time and place of use. Portal enables process improvement of organisational governance.

Configure to include your own governance model

Process Mentor - Raptor provides the ability to include, create, and manage your own governance models and methodology. All automation and enactment functionality within the Process Mentor product suite will use the organisation's own governance models to create and control project/operational material.

Govern using best practice

Process Mentor is a pragmatic solution for commercial applications. Using extensive real-world project delivery experience, it draws upon best practice standards for Architecture, design patterns and methodologies and incorporates those that are practical and useful. Reflected in the asset library are project management standards (PMBOK and Prince2), systems development (CMMI), business analysis standards (BABOK), architecture standards (TOGAF), etc. Process Mentor builds on these strengths, whilst providing the flexibility to form your own governance models.
