

The platform to create, modify and enhance process architecture

Benefits Realisation

Built into everything we do and into the content of Process Mentor, benefits realisation is fundamental to increasing project success. Roadmaps and processes are built on this basic premise.

Full Life Cycle Coverage

Process Mentor encompasses the entire systems / software development lifecycle. This includes concept exploration, alternative evaluation, business investigation, requirements analysis, enterprise/ system modelling, design, development, implementation & testing. Across the complete lifecycle Process Mentor provides the control of industry standard Project Methodologies from Agile to Program Management.

IT Governance

Process Mentor supports broader enterprise issues such as governance and compliance. It supports organisations' focus on compliance with standards such as COBIT, Basel 2 and Sarbanes Oxley.

Toolsets

Process Mentor has the ability to sit across multiple toolsets from software development to project management. This allows developers to use Process Mentor right in their development environment and project managers to use the tricks and tools they are familiar with.

Scalable & Customisable

Process Mentor has a process architecture that provides organisations with a guiding set of best practice processes, techniques, and deliverables. This process architecture provides the flexibility to combine processes and techniques and tailor them to meet specific organisational needs. Organisations have complete control to create, modify, and enhance their own process architectures.

Enabling organisations to deliver high quality projects, systems, and software, Process Mentor® is developed by Object Consulting; Australia's leader in the delivery of enterprise business solutions. Used by more than 9000 users in 70 organisations internationally; Process Mentor is founded on practical experience and application rather than just theory.

Roles

Projects are delivered by people, so Process Mentor is comprised of modules tailored to each of the key roles in a project team: Project Manager, Business Analyst, Architect, Designer/Developer and Tester. Each module covers all the processes, activities and deliverables that a person undertaking a specified role needs to manage in order to maximise their effectiveness.

Process Units

Process Units are the reusable building blocks of the Process Mentor methodology. They encapsulate deliverable templates, resource requirements and techniques for a particular area of expertise such as testing or requirements gathering.

Project Roadmaps

Project Roadmaps are time-sequenced sets of work breakdown structures, deliverables, and approval processes. A project roadmap combines a number of process units and information from the modules, based on what is appropriate for a specified project. Process Mentor has a number of predefined project roadmaps allowing you to choose the process to fit the style and type of project.
